type of human immunodeticiency virus (HIV) dag or Buv polypeptides are userful in DNA immunization, generation of packaging cell lines and production of dag- and/or Env-containing proteins. Synthetic Env and dag expression cassettes exhibit increased potency for induction of experience of the proper (CIL) respenses by DNA immunization, dag of HIV-1 self-assemble into non-intections virus-1 ke particles which are used as a matrix for the proper presentation of an antigen entrapped or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Polynucleotide encoding antigenic type C HIV Gag polypeptide or a HIV

Expression cassettes comprising a polynucleotide encoding antigenic type c human immunodeficiency vicus (HTV) Gag or Env polypeptides are useful in DNA immunisation, generation of packaging cell lines and production of Gag- and/or Env-containing proteins. Synthetic Env and Cag expression cassettes exhibit increased potency for induction of cytoxoxic T-lymphocyte (CTL) responses by DNA immunization. Gag of HIV-1 self-assemble into non-infectious vilus-like patiticles which are used as a matrix for the proper presentation of an antigen entrapped or associated to the immune system of the host.
                                                                                                                                                                                                Codon usage pattern was modified and inhibitory elements (INS) and RRE sites were inactivated resulting in improved expression"

The present sequence is the coding sequence of a HTV Gag expression cassette, Gag.McdSF2. The Gag prittin of HTV is cashed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HTV life cycle, including assembly, virion maturation after particle release and early post entry stages in viral replication. The expression cassette may be used for the recombinant expression of HTV Gag-polypeptides which may then be used to vaccinate against HTV

infection and acquired immunodeliciency syndiome (Albs).

Expression cassettes encoding the human immunodeficiency virus (HIV)

Gaq-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndrome (AIDS) -

Claim 3; Fig 7; 391pp; English.

                                                                                                    The present invention relates to synthetic HIV Gap and Env expression vassettes. The Gap protein of HIV is needed for the assembly of virus-like particles. In addition, the Gap protein is involved in many stages of the HIV like eyele, including assembly, virion maturation after particle release and early post entry steps in viral replication. The expression easeltes may be used to the tereshelmed expression of HIV intestion and Env-polypeptides which may then be used to varctimate against HIV intestion and addited inmanodeticiency syndrome (ALDS). The present sequence is a synthetic construct constructed in the generation of the expression cassettes of the present invention. This construct is bicistronic in that the coding sequences for Env and Gap are under the control of a single CMV promoter and between the two coding sequences an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2939. atigagegeereegeeagegtgeftgageegaeegagetgageetgagetagagaagaagaagaegaegaega

The present invention relates to synthetic HIV Gag and Env expression cassettes. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post entry Steps in viral replication. The expression cassettes may be used for the recombinant expression of HIV gag- and Env-polypeptides which may then be used to vaccinate adminst HIV infection and acquired immunodeficiency syndrome (AIDS). The present sequence is a synthetic construct constructed in the generation of the variesisten cassettes of the present invention. This construct is bisistronic in that the coding sequences for Env and Gag are under the control of a single CMV promoter and between the two coding sequences an Internal Ribosome Entry Site (IRES) is present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1255 etgggccagetgcageccagectgcagaccggcagaggaggaggetgcgcagcctgtacaac 3314

The present invention relates to synthetic HIV Gaq and Env expression cassettes. The Gaq protein of HIV is needed for the assembly of virus-like particles. In addition, the Gaq protein is involved in many stages of the HIV life eyele, including assembly, virice maturation after particle release and early post entry steps in viral replication. The expression cassettes may be used for the recombinate expression of HIV caq- and Env-polypeptides which may then be used to vaceinate against HIV intertion and acquired immunodeliciency syndrome (ALDS). The present sequence is a synthetic construct constructed in the generation of the expression cassettes of the present invention. This construct is bicistronic in the coding sequences for Env and Gaq are under the reality side expressed or a single ENV promoter and between the two coding sequences an internal Ribosome Entry Site (IRES) is present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3156 Intergreeustrandentari dadrigaridar dadri 1915

Z Z Z Z	Expression cassettes encoding the human immunodeficiency virus (HIV) Gaq-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndiome (AIDS) -
× S	Claim 27; Fig 61; 391pp; English.
X C C	The present invention relates to synthetic HIV Gay and Env expression cascattes. The Gay protein of HIV is needed for the assembly of
36	virus-like particles. In addition, the Gay protein is involved in mary stages of the HIV life cycle, including assembly, virion maturation after
38	particle release and carly post Ontry Steps II Vital reprisersion expression cassettes may be used for the recombinant expression of HIV
35	Gag- and Env-polypeptides which may then be used to vaccinate resemble infection and acquired immunodeficiency syndrome (AIDS). The present
888	sequence is a synthetic construct constructed in the generation of the expression cassettes of the present invention. This construct is expression cassettes of the present invention.
3 E E	Dicistronic in that the couling sequences to the two coding sequences an control of a single CMV promoter and between the two coding sequences an internal Ribosome EnLFV Site (IRES) is present.

· · The present sequence is the coding sequence of a HIV Gag-protoase expression cassette, GagProt ModS. The Gag protein of HIV is næded for the assembly of virus-like particles. In addition, the Gag protein is invested is many states of the HIV like eyele, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag polypeptides which may then be used to vacchiate against HIV intection and acquired lammandeliciency syndrome (ALES). 61 ofgegerenggegaagaagaan arafgetgaagaaretgaagaaretgg. 67 intigegeonegginggesagaagaagtacaagnigaageanatingtigtgggeeageegegag 126 12) etggaggettegeeetgaaceeeggeetgetggagaeegeegagggetgeaageagate 180 187 etaggecageturayeetgeetgeetgeagaeeggeageggagetgegeageetgtacaae 245 401 et aquecaaqui equaquaquageaqaaetaqi ecceaqeaqaaqeaqqaqqaq 360 - ELLE ELLE 367- grogorga assign-ansagsags agattgags bagaastarcrategtgeagaaceta 426 427 ragggecagatugtgeaceaggeeateageeegeaeeetgaaeegeetgggtgaaggtg 486 geranceri vayyaretygaeacaeyatyttyaanacegtyyyrygecaecaggeogecatg 606 586 - caqatigotidaaggaraccatoaacgaggaggacgecgagtyggaccgectgeacegty - 645 Expression cassottes enoughry the human immunodeficiency virus (HIV) 247. annytyyyniannetytantynytysannaynyvatryanythiaayyadaccaaggaggod 127 et ggagegettegeegtgaaneengeetgetgagaaeagggggetgeeggeegate 18] at qaagcaqet geageeegeeetgeaqaeeggeaeegaqqaqetgegeageetgtacaae accepted accepted the transfer of the accepted and the control of 307 intiggagadatingaggaggaggagagagtonaagaagagguoggoogoogoo 461 geogacogress some additional according to a grant and a grant and a grant and a grant a gr 487 intiquaggadaaggeent teageneegaggigateeecalgiiteagegeetgagegagge geracemenagaint gaarapgat qt tigaacaecqtyqqqqqqciain aggecyneitig Ouery Match 74.1%; Score 1187.8; DB 21; Length 1853; Hest Local Similarity 85.1%; Pred. ```
The present sequence is the coding sequence of a HIV Gag protease expression cassetto, GagProtMod.SF2 (GPI). The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       caqqqccaqatqqtqcaccaqqccatcaqccccqcaccctqaacqctggqtqaaqqtq 465

```
The present sequence is the coding sequence of a HIV Gaq-polymerasc expression cassette, GaqPol.ModSF. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle repleated may be used for the recombinant expression cassette may be used for the recombinant expression of HIV dag pulypeptides which may then be used to varining against HIV infection and acquired immunodeficiency syndrome (AIDS).

```
The present sequence is a gas coding region of codon optimised HIV adapped sequence. This sequence is used in the packaging sequence is each line. Codon optimisation results in improved expression of the gagpol projet in and reduces the risk of recombination between the transfer
The packaging cell line comprises a mammalian cell, a retroviral DNA comprising a coding sequence for a refliction, preterably HIV, gaspol, where the coding sequence has been mutagenised to improve expression of the viral gaspoi proteins, a second retroviral mucleotide sequence comprising the coding sequence for a heterologous envelope protein and a
                                                                                                                                                                                                                                                                                                                                                                                     They can also be used
                                                                                                                                                                                                                                                                                                                                        The packaging cell lines and viral particles can be used for gene therapy of gene replacement with improved safety. They can also be used in the development and production of varcines and biochemical reagents.
                                                                                                                                                                                                            third retrovital moefectide sequence comprising a DNA sequence of
interest and lentivitus, preterably HIV, cis acting sequences required
for packaging, reverse transcription and integration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | HEHITTER | HELLER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HER | HE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               601 etgaaqquqqaeeateaaeqqaqqaqqeeqeeqaqtqqqaeeqeetqeaeeeeqqee 660

Polynucleotide encoding antiquate type C HIV dag polypeptide or a HIV Env polypeptide and the polypeptide useful for immunizing a mammal especially human against HIV

~

; 0

Gaps

```
Expression cassettes comprising a polynucleotide encoding antigenic type c human immunodeficiency virus (HIV) Gag or Env polypeptides are useful in DNA immunization, generation of packaging cell lines and production of Gag- and/or Env-containing proteins. Synthetic Env and Gag expression cassettes exhibit increased potency for induction of cytotoxic I-lymphocyte (CTL) responses by DNA immunization. Gag of HIV 1 self-assemble into non-infectious virus-like particles which are used as a matrix for the proper presentation of an antigen entrapped or associated to the immune system of the host.

Expression casseties comprising a polynucleotide encoding antigenic type C human immunodeliciency withs (HV) Cag or Enr polypeptides are useful in DNA immunization, generation of packaging cell lines and production of Gag- and/Arr Piv containing proteins. Synthetic Env and expression casseties exhibit increased potency for induction of evicotoxic T lymphocyte (CTL) responses by DNA immunization. Gag of HIV-3 self-assemble into non-infections virus-like particles which are used as a matrix for the proper presentation of an antique entrapped or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polynacieotide encoding antigenic type C HIV Gag polypeptide or a HIV Env polypeptide and the polypeptide useful for immunizing a mammal especially human against HIV

Expression cassettes comprising a polynucleotide encoding antiquency type C human immunodeficiency virus (HVV) Gag or Env polypeptides are useful in DNA immunization, generation of packating cell lines and production of Gag and/or Env-containing proteins. Syntheric Env and Gag expression cassettes exhibit increased potency for induction of expression cassettes exhibit increased potency for induction of expression cassemble into non-interficus virus like particles which are used as a matrix for the proper presentation of an antiquen entrapped or

The gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle classette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0
                                                                                                                               The present invention relates to synthetic HIV Gay expression cassettes. The Gay protein of HIV is needed for the assembly of virus-like particles. In addition, the Gay protein is involved in many stages of the

```
qaapol sequence. This sequence is used in the packaging cell line. Codon optimisation results in improved expression of the gagpol protein and reduces the risk of recombination between the transfer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cassette, Gaq MedSP2. The Gay protein of HIV is needed for the assembly of virus-like particles, in addition, the Gay protein is involved in many stages of the HIV life evel, including assembly, virion maturation after particle release and early posternity steps in vioa replication. The expression cassette may be used for the recombinant expression of
in the development and production of vaccines and biochemical reagents. The present sequence is a gas coding region of codon optimised BIV
                                                                                                                                                                                                                                                                         HIV Gig-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is the coding sequence of a HIV Gaq-protease expression cassette, GagProt.ModS. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post cut; steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gaq-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HIV Gag-protease expression massette coding sequence GayProtMod.SF2(GF1).

HIV Gag-protease expression cassette coding sequence GagProtMod.SF2(GP2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the coding sequence of a HIV dag-protease expression cassette, GagProtMod.SF2 (GP1). The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-PolyPeptides which may then be used to viscinate against HIV infection and arquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  l gacatcaagcagggccccaaggagccttnngngactangtggaccgcttcttcaagacc 60
